

Weekly Report (Aug 14~Aug 20)

Liwen Lin

Done

Made a HOLA view. Each vertex uses two rings to show values of two dimensions.

In the example above, the outer ring encodes values of voltage on BUS1 and the inner ring encodes values of frequency. The circle is divided into several parts where each represent a set of time points. For each arc, the outer and inner radius represent the range of value within this period.

In Process

Adding two functions to the HOLA view: 1) Zooming; 2) Separating / Grouping, to divide the time sequence into smaller or larger periods, to show the whole trend or detailed information.

Todo

Other functions are still under discussion.
